

ShadeShift

**The ticket gets you a seat.
It does not get you shade.**

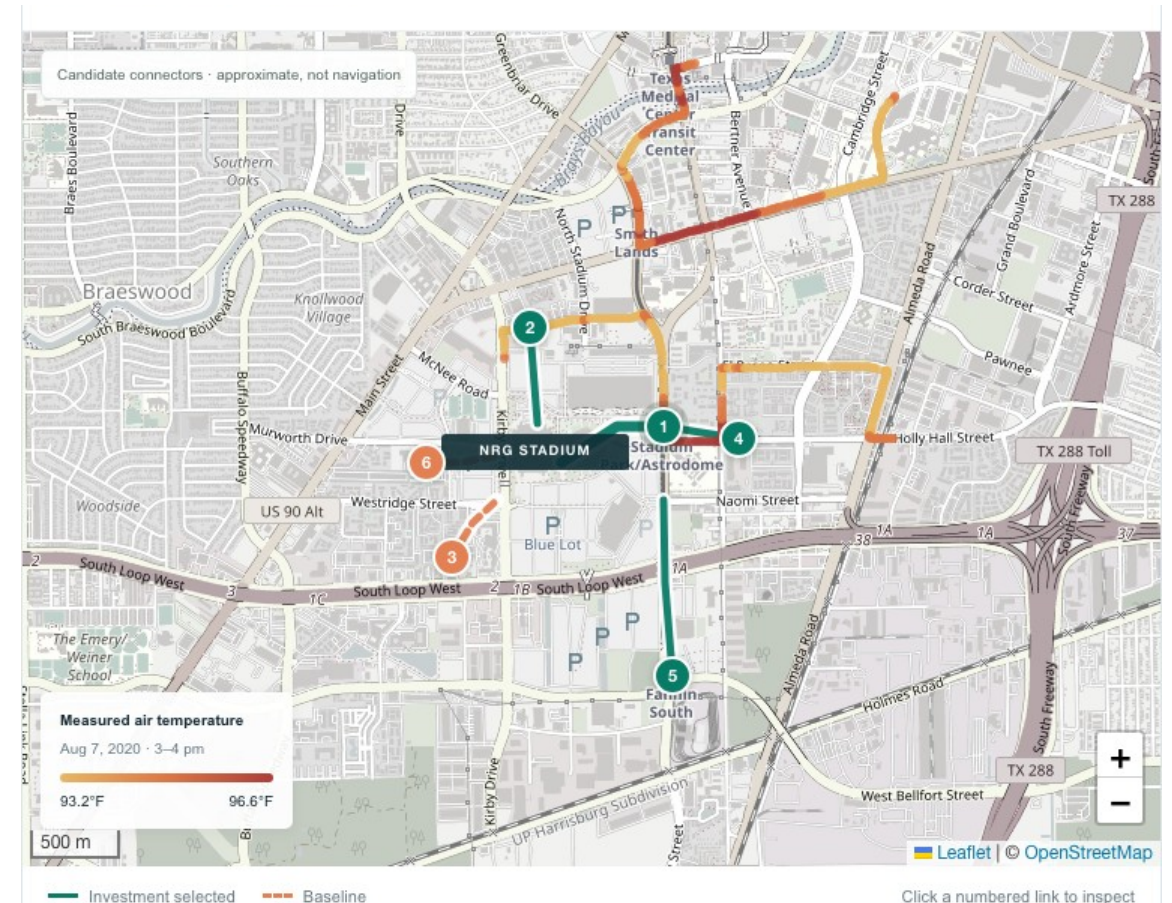

A budget and deployment planner for the outdoor walks and queues around major events.

Venue operations has a recurring decision

Where should the next \$70,000 go?

Allocate shade, queue changes and refill access before each event.

Compare allocations. Save privately.
Export a plan for operator review.

Measured context. Visible assumptions.

654

Houston temperature observations

7 August 2020, 3–4 pm
H3AT / CAPA / HARC mobile sensors
Coverage is partial around the venue.

11

U.S. host-location weather benchmarks

49 afternoons per venue in summer 2025
Consistent ERA5 modeled weather
Seasonal context, not a 2026 forecast.

Visitor counts, dwell time, shade coverage, costs and intervention effects remain editable planning assumptions.

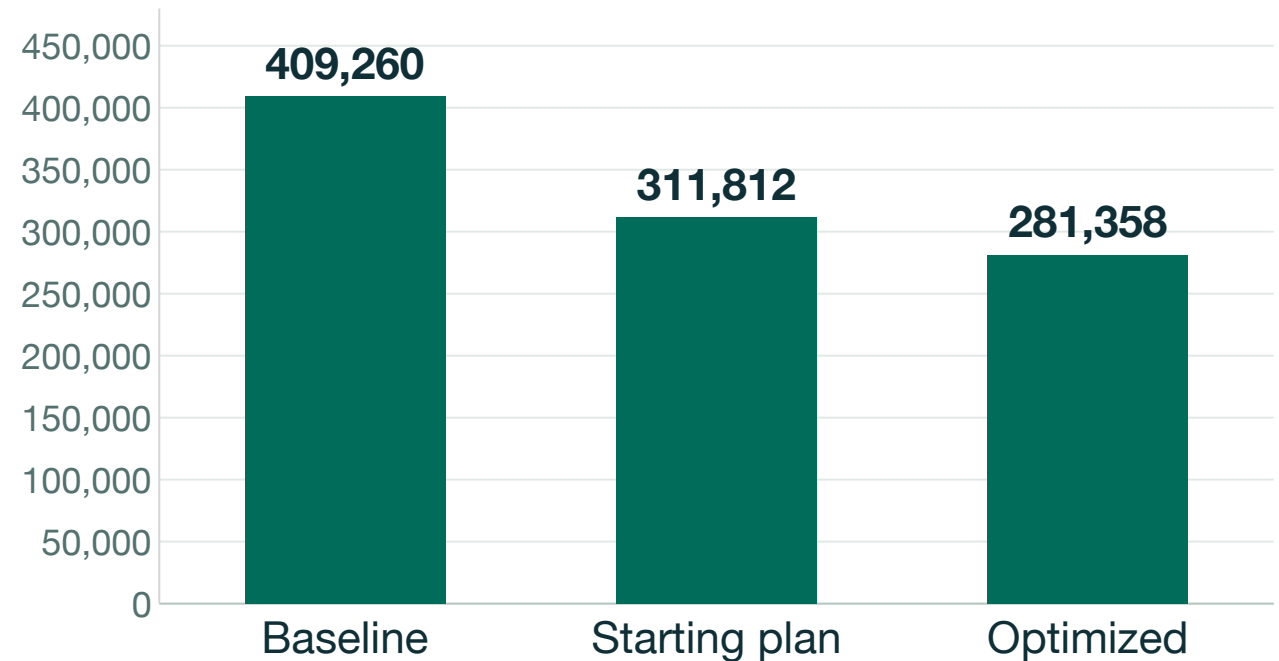

Same \$70,000. Different allocation.

31.25%

modeled direct-sun time reduction
with the exposure-maximizing plan

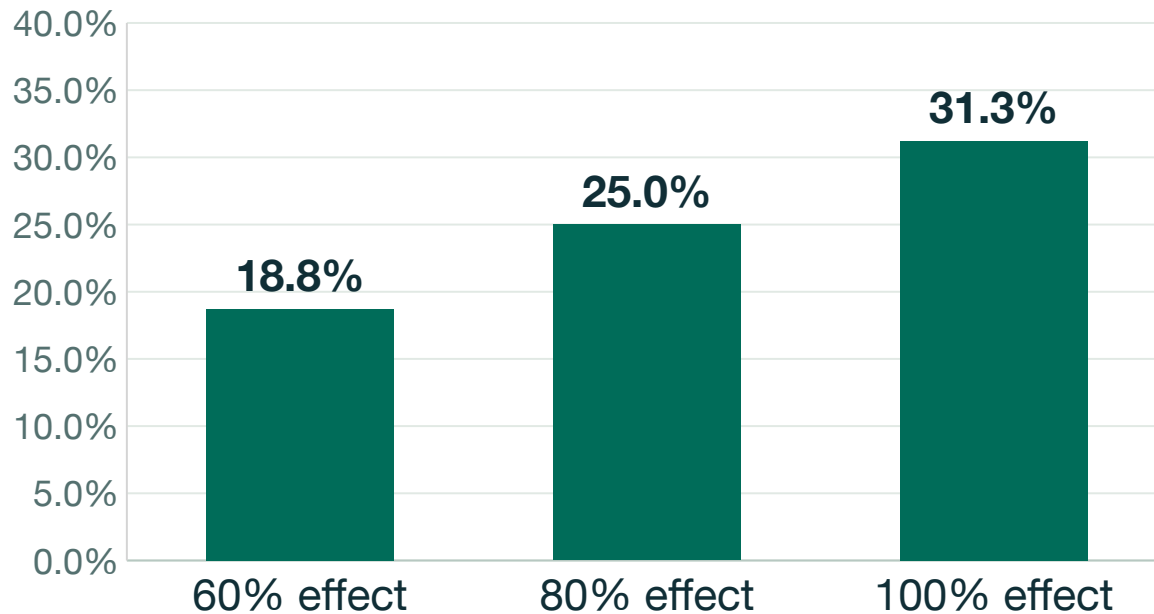

**127,902 person-minutes
avoided
per modeled event**

Arithmetic verified against the model.
Physical impact has not been measured.

Remaining direct-sun person-minutes per event

More exposure reduction can mean less service

Fixed optimized portfolio: intervention effectiveness changes the estimated reduction from 18.75% to 31.25%.

Water access

1,200 refills to 0

Community-weighted investment

53.29% to 27.43%

Starting plan to optimized plan.
The operator still decides what to fund.

A paid pilot before a subscription

\$5,000

Two-event assisted pilot

Field audit, scenario workshops,
plan exports and a measured review.

\$6,000 / year

One venue, repeat events

Test renewal after the pilot.
Hardware and installation are separate.

Prices are hypotheses. Measure planning hours, accepted plans and repeat use before claiming commercial traction.

One venue. Two events. A reuse plan.

Days 1–30

Walk the sites

Verify access and shade.
Measure counts and
queue times.
Obtain supplier quotes.

Days 31–60

Run event one

Obtain operator approval.
Compare the plan with
observed exposed time
and planning hours.

Days 61–90

Reuse and review

Run the second event.
Assign asset ownership.
Test community reuse
and renewal.

Legacy estimates use separate resident demand and reuse days. No automatic annualization of event attendance.

One venue partner. Two events.

A plan we can verify on the ground.

Provide site access and operator counts.
We test the inputs, planning value and repeat use.
